

# *S Scale #6 Right Hand Switch Template*

These templates will help you with the design of your layout by checking the fit of the switch to your space. When you have the best location for the switch glue the template in place and use it to space your ties and locate the frog. When printing these templates make sure your printer is set to print full size and not set to fit the image to your paper size. Cut templates out and tape them together. Glue the template to the layout with white PVA glue. Glue the ties in place and then install the rail using your track gauge.

Cut template on this line and join to the other half of the switch.
